FINAL PRODUCT AND LIFESTYLE IMAGES

FIRST, I DID SOME MARKET RESEARCH

What the market told us.

Prebiotic soda is growing fast, but it was built on vague gut-health promises. Four findings shaped every FORM decision, from the name to the end line.

$1.95B

PEPSICO'S PRICE FOR POPPI, 2025

The category is real, and the giants are in.

US prebiotic and "better soda" sales are around $1.5B a year, nearly all of it Olipop and Poppi. Olipop doubled to about $400M in 2024 at a $1.85B valuation, and Coca-Cola launched Simply Pop in 2025.

SO FORM

Can't win by shouting "gut health" louder than PepsiCo. It needs one idea the big brands don't own.

$8.9M

POPPI'S SETTLEMENT OVER GUT-HEALTH CLAIMS

Shoppers have stopped trusting the claim.

A class action argued Poppi's prebiotic fiber was too small a dose to matter. Fiber across the category ranges from about 2 g to 9 g a can, and the front of the can rarely says which.

SO FORM

Puts the proof on the front: 6 g fiber, 3 g sugar, a 2:1 ratio anyone can check. Numbers before adjectives.

<10%

OF US WOMEN MEET THEIR FIBER NEEDS

There is a fiber gap, and a trend to match.

The average American eats about 15 g of fiber a day against a 25 to 38 g recommendation. "Fibermaxxing" became one of the most talked-about food trends of 2025.

SO FORM

Leads with fiber, not probiotics: a three-fiber blend at 6 g, and a UGC storytime that rides the fibermaxxing trend.

49%

OF US ADULTS TRYING TO DRINK LESS IN 2025

The buyer is a label-reader who still wants a treat.

Prebiotic sodas over-index with young women bored of diet soda. Gen Z already makes up a quarter of Olipop's adoption, and 65% of Gen Z plan to drink less alcohol.

SO FORM

Targets women 28 to 38 at two moments, the 4pm swap and the alcohol-free dinner, with a calm, not clinical voice.

In a category built on vague gut claims, FORM *shows the ratio.*

FINALLY, HOW I MADE IT AND WHAT IT COST

How this was made.

A real pipeline, not a lot of unorganized generations. I locked the foundation, approved stills before motion, and edited one master instead of going shot to shot.

1

Foundation

Logo, product master, palette and a written product lock, frozen before production.

2

Style kit

One Artlist style kit. Each generation pulls only the items it needs.

3

Stills first

Keyframes approved before any animation, because video costs ten times more.

4

Animate

Start and end frames, physics rules and timed shot lists in every prompt.

5

Feed back

Approved frames go back into the kit, so the signed-off look leads.

THEN I BUILT THE PRODUCT IMAGE SYSTEM

One product, endless assets.

A locked product master

Every shot of the can starts from one definitive packshot, never a fresh description of it.

Edits of one master, not chains

Each keyframe is an edit of the same master frame. Prompts say only what changes and keep everything else identical, so drift can't build up.

A style kit that grows

Palette, product lock and art direction first. Approved people, light and material frames were added after review.

Rules, not hopes

Written "never" rules for physics (sealed, rigid, never leaks) and for scale, measured against hands and glasses.

Tools per stage

STAGE	TOOL / MODEL	WHY
Product master	**Artlist · Nano Banana**	Precise image-to-image from the supplied can and logo; holds the typography on the pack.
Images & keyframes	**Artlist · Nano Banana 2.1**	Edits of one master: prompt only the change, keep everything else identical.
Video	**Artlist · Kling 3.0** **Artlist · Seedance 2.5**	Kling: start and end frame control, and the best hand and liquid motion for the cost. Seedance: the UGC video. Each shot got the image, the prompt and a recorded voiceover file, so the model only lip-synced her to my VO instead of generating its own.
Music	**Artlist · Lyria 3 Pro**	Instrumental beds scored to each cut's pacing.
Voice	**Artlist · Eleven v3**	Distinct voices for Lemon, Basil and Mint, plus a narrator.
Prompts, edit & build	**Aviv & Claude**	Structured prompts, the edit, titles, data cards and the submission page.

Iterations worth showing

CONTINUITY

The table kept changing

In Lemon Left Mint the set jumped from studio to wood and the produce looked fake.

Approved keyframes in one locked set before animating.

PHYSICS

The can that leaked

The can popped into frame, jumped and leaked.

Explicit rules (sealed, rigid, never leaves the surface) plus a timed shot list.

COST

Lemon too big

Wrong scale in the two-shot.

An edit that changed only the lemon: 250 credits, not a full regeneration.

EDIT

Jump cut at 0:04

A push-in mismatch between two clips.

A crop punch-in and a three-frame dissolve. No regeneration.

MODEL CHOICE

Veo vs Kling

The lockshift can-opening, run on both models.

Kling gave better hand motion at about a third of the cost.

PROCESS

Check before you generate

About 500 credits spent re-making a clip that already existed.

Audit existing assets first. It became a pipeline step.

Credit usage

~88K credits

Pulled from the Artlist account history for the whole project, 20 to 24 October. Video took about 70% of the spend. Images cost little and were explored freely; video credits were spent only on approved keyframes.

BY THE BRIEF'S CATEGORIES

Product imagery Product set + lifestyle set, including fixes	5.6K
Short-form video Four videos, including all retakes	69.9K
Product innovation film Keyframes, clips, narrator takes and score	12.4K

CREDITS PER ASSET

ASSET	CREDITS	GENERATIONS
Fibermaxxing, day 14 Short-form · UGC	37,935	20 images · 15 videos · 1 music · 5 voice
Lemon Left Mint Short-form · story	13,811	19 images · 18 videos · 2 music · 7 voice
Feel Good. Anywhere. Anytime. Short-form · trend	13,140	23 images · 17 videos · 1 music
Inside the ratio Innovation film	12,443	17 images · 13 videos · 1 music · 23 voice
Bubble Formation Short-form · visual	5,050	10 images · 9 videos · 2 music
Product image set Images	2,930	24 images
Lifestyle images Images	2,625	21 images
Total	**87,934**	**248 generations**

Every generation in the account history was matched to the asset it was made for, including retakes and fixes.

BY MEDIA TYPE

TYPE	VOLUME	CREDITS	SHARE
Video	72 generations	61,260	70%
Images	134 generations	23,660	27%
Music	7 tracks	2,100	2%
Voice-over	35 takes	914	1%
